Process

- You are required to complete this application in full and please ensure that if you are an existing Eskom customer you provide the details of your existing supply.
- Eskom will acknowledge receipt of the application and will contact you using details provided.
- Once all the relevant information has been gathered by Eskom from the Customer (or the technical agent representing the Customer) Eskom will respond to the application in the form of a Quotation fee and thereafter a quotation containing connection charges for the connection works that will be required.
- The quote will comprise of the network impact and limitations (if any), technical scope of work, timing of the commissioning date, and terms and conditions that may apply.
- The work required on Eskom's side will only start once the applicant has accepted Eskom's quotation and any other agreements that are applicable, in writing.
- The applicant will be required to comply with the requirements set out in Schedule 2 of the Electricity Regulation Act (ERA) regarding licensing, registration or to be exempt from registration, for your generation facility. **Any SSEG installation above 100kW requires registration approval from NERSA. The applicant is required to obtain this approval before Eskom will allow the connection to the grid.**
- As part of the Eskom technical requirements, the customer must at own cost:
 - o provide an isolation point after the Eskom meter that is accessible by Eskom (within 2m from Eskom meter however not fixed to the Eskom structure).
 - o provide a Single Line Diagram inside the kiosk of the isolator.
 - o provide a DGSL (Dead Grid Safety Lock) if there is no isolator or an Electromechanical switch with a coil energised from the utility side.
 - o have the "embedded generation installation (EGI) compliance test report" which forms part of Eskom's connection and use of system agreement completed by a professionally registered competent person. A copy of this report can be found on the Eskom website.

Definition:

Dedicated Network (Feeder)	Section of the utility network that exclusively supplies a single customer/generator. See Annexure A Note: A dedicated network can be a dedicated LV feeder (directly from transformer busbar), or a dedicated MV/LV transformer.
Shared Network (Feeder)	Section of the utility network that supplies more than one customer/generator connected at LV See Annexure A
SSEG Size in the application	Is the total AC active power output of the SSEG in the entire facility, whilst generating at full active power output. For simplicity, the rated nameplate capacity of the inverter. Note: The generator size should not exceed the 75% limitation of the transformer or NMD for dedicated networks. Do not use the 75% limitation as a default value for application but the exact size of the system.
MEC: Maximum export capacity as per the customers application form	Means the total AC active power exported into the grid as measured at the point of utility connection, with the EG generating at full active power output and the other load (consumption) circuits connected to the EG, measuring minimal or no-load consumption.

Applicable technical and other relevant documents:

It is the applicant's responsibility to comply with:

- The applicable technical, design and operational standards detailed in the Eskom Standards, South African National Standards, South African Grid Code and the applicable South African Distribution Codes. Copies of the applicable Codes may be downloaded from NERSA's website - www.nersa.org.za.
- The Occupational Health and Safety Act, (Act 85 of 1993) and the requirement for a Certificate of Compliance for SSEG connections.

Information on the Eskom standards can be obtained by registering on the NRS website: <https://scot.eskom.co.za> and use the following steps:

1. Click on "Login" on the right hand corner, and a login field will appear.
2. Click on "New user" and fill in your details as complete as possible.
3. Click on "Submit"

The Electricity Regulation Act 6 of 2006 details the legislative requirements with regard to the generation, transmission, distribution and trading of electricity. In this regard, you will be required to comply with any conditions in the Act that may pertain to generation and trading of energy as applicable.

Environmental Requirements:

The applicant must ensure that they are aware of:

- the statutory approvals from all regulatory bodies, infrastructure providers and utilities that are required for the construction and operation of a generation plant and associated activities,

infrastructure traversing land needs to be protected by a servitude/s, which is registered against the title deed of the affected property.

Eskom contact details:

To complete an application form, please contact Eskom on **08600 37566**, or go to the Eskom website www.eskom.co.za to complete an online application form at <https://www.eskom.co.za/CustomerCare/NewSupply/Pages/GeneratorConnect.aspx>

Standard quotation fee for SSEG customers from 1 April 2022 till 31 March 2023.

The cost of producing a generator quotation is an actual cost to Eskom and a standard quotation fee will be charged for the generator quotation.

The quotation fee will be payable upfront and will form part of the connection charge. This fee is non-refundable if the quote is not accepted by the customer. Customers are to be advised of the fees payable upfront as required in terms of the Consumer Protection Act.

SSEG SIZE CATEGORY	APPLICABLE STANDARD QUOTATION FEE
0 – 350kW (SSEG with an existing LV Eskom supply)	R 1 861.15 + VAT = R 2 140.32
> 350kW – 1MW (SSEG with an existing LV Eskom supply)	R 3 356.52 + VAT = R 3 860.00
> 0kW – 1MW (SSEG with an existing MV Eskom supply – (minor process)	R 3 356.52 + VAT = R 3 860.00
> 0kW – 1MW (SSEG with an existing MV Eskom supply – (major process)	R16 765.22 + Vat = R 19 280.00
*These fees are subject to change based on the approved rates per year
